

Luis A. Saenz

Systems Security Researcher | MS CS @ UTSA | San Antonio, TX |
luis.saenz.compsci@gmail.com | linkedin.com/in/luisarmandosaenz | luisaenz.me |
github.com/Luiss003 | youtube.com/@LuisSaenz-RevEng

EDUCATION

- | | |
|------|---|
| 2027 | M.S., Computer Science, The University of Texas at San Antonio. Expected May 2027
GPA: 4.0 |
| 2025 | B.S., Computer Science, The University of Texas at San Antonio, summa cum laude.
GPA: 3.98. Minor and concentration in Cybersecurity |

RESEARCH INTERESTS

Systems security; exploit development; automated vulnerability research; binary analysis; machine learning for vulnerability research.

RESEARCH EXPERIENCE

- | | |
|-------------|---|
| 2026 – 2027 | Master's Thesis: Resource Efficient Binary Vulnerability Detection
Investigating Ghidra p-code as normalized representations for cross-architecture vulnerability detection under reduced compute and data requirements. |
|-------------|---|

TECHNICAL PROJECTS

- | | |
|------|---|
| 2026 | cage: Minimal Linux Sandbox and Syscall Monitor: C, Linux, ptrace, namespaces, cgroups v2, seccomp-BPF.
Built a small Linux confinement runtime for running programs under configurable process, filesystem, resource, and syscall restrictions. |
| 2026 | Decaf Compiler Construction Project: C++, Flex, Bison, MIPS
Implemented lexical analysis, parsing, semantic analysis, type checking, and MIPS code generation for a Decaf language compiler. |
| 2025 | LuRETools : Systems Security Utility Suite: C, libpcap, libnet
Developed PE/ELF metadata utilities and link-layer packet replay tooling for binary and network protocol analysis. |
| 2025 | WannaCry Analysis Case Study: FLARE VM, Ghidra, WinDbg
Reverse engineered WannaCry's EternalBlue-based SMBv1 exploit chain and analyzed its AES/RSA encryption workflow, mutex-based execution controls, and lateral movement behavior through Windows service scanning. |

TEACHING EXPERIENCE

2025 – 2026 Graduate Grader, Department of Computer Science, The University of Texas at San Antonio
Evaluated programming assignments and provided feedback on software architecture, design patterns, and code quality.

AWARDS AND HONORS

2025 Technical Offer of Appointment, Vulnerability Research Co-Op, Battelle
2023 – 2025 Digital Defense Endowment Scholarship, Digital Defense Inc.
2023 – 2025 CNF Cyber Security Scholarship, CNF Technologies

TECHNICAL SKILLS

Programming: C/C++, Python, Java, x86/x86-64, ARM64
Reverse Engineering and Security: Ghidra, GDB, WinDbg, FLARE VM, Remnux
Systems: Linux internals, system calls, pthreads, synchronization, raw sockets, file systems
Virtualization and Tooling: Docker, Proxmox VE, REMnux, FLARE VM, QEMU

OUTREACH AND TECHNICAL DEVELOPMENT

2025 – present Reverse Engineering and Systems Security YouTube: @LuisSaenz-Rev-Eng.
Technical videos on malware analysis, reverse engineering, systems security, and exploit development.
2025 – present pwn.college Binary Exploitation and Program Security Training.
Completed challenges in Linux exploitation, shellcoding, memory corruption, ROP, sandbox escaping, and syscall level security.

NON-ACADEMIC PROFESSIONAL EXPERIENCE

2025-2026 Founder and Lead Engineer, erratumAI.
Built a full-stack AI-powered textbook correction platform using Spring Boot, React, PostgreSQL, Redis and GCP.
